The colon CC cancer antigens have cytostatic activity and can be used in gene therapy CC and vaccine production. N and P may be used in the prevention, diagnosis CC and treatment of diseases associated with inappropriate P expression. For CC example, N and P may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of P by expressing inactive proteins or to CC supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids CC into a host cell and culturing the cell to express the proteins. N and P CC can be used in the prevention, diagnosis and treatment of colorectal CC excinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC sequences used in the prevention, diagnosis and treatment of colorectal CC excinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (AAB60386, AAB60387), designated NTZRWI100558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells roomprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents the human apoptosis-associated factor NT2RM1000558

Reproductive disorders include disorders of syndrome, ectopic pregnancies, galactorrhea, abnormal sperm physiology, consecutions of male breast and gynecomastia. The APRG polynucleotides are consecutions of male breast and gynecomastia. The APRG polynucleotides are consecutions of male breast and gynecomastia. The APRG polynucleotides are consecutions of it and antibodies specific for APRG are useful as clements on a microarray which is useful to monitor or measure protein-consecutions interactions, drug-target interactions and gene expression context or protein interactions, drug-target interactions and gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present sequence represents a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigat of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment

investigation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
CC The invention relates to an isolated polypeptide comprising a death CC domain (DE), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC (CO NIDD (NGFR-interacting Death Domain), with a candidate binding agent and CC electing the association of the domain and the candidate binding agent and CC electing the association of the domain and the candidate binding agent and CC py yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass Spectroscopy (MS) and FPA, The invention is useful for modulating the CC stress responses such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. CC triationdy specifically reactive with CTDD DD of C trachomatis, C muridarum, C. pneumoniae, and C. psitraci or a nucleic acid encoding the CC control is useful for modulating the activity of oncogenic proteins, the section is useful for modulating the activity of oncogenic proteins, and for treating a pathology caused by the oncogenic proteins and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treating bacterial infections by modulating the activity of bacterial proteins. The protein and antibody specific for it are useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense therapy and gene therapy. The present sequence is human DED4 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC receptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DED4 or NIDD with a candidate CC binding agent and identifying an effective agent (e.g. protein or drug) CC that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC modulating the level of cell process such as apoptosis, cell adhesion, CC cell proliferation, cell stress responses, responses to microbial CC infection and B cell immunoglobulin class switching. DDs, DED5 and NB-ARC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are CC useful for discovery of drugs that suppress infection, autoimmunity, CC cinflammation, allergy, allograft rejection, sepsis and other diseases. CC inflammation, allograft rejection, sepsis and other diseases. CC hyperplasia, neoplasia, keloid, benign prostatic hypertrophy, fibrosis, cinflammatory hyperplasia and smooth musele cell proliferation in arteries CC inflammatory hyperplasia and smooth musele cell proliferation in arteries CC intology the properties of the present sequence is human DED4 contents. The DED4 gene is located on chromosome 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       No.:

Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58166 - AAB5858. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the prote or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnosti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-10-030-271-3 (1-1883) x AAB58420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
ABE39691 to ABE39818 represent novel human nucleic acid sequences encoding the proteins given in ABB06037 to ABB06164. The novel sequences (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, antirheumatic, antiarthric, antipsoriatic, ophthalmological, virucide, vasotropic, antiarteriosclerotic, antiinflammatory, dermatological, anorectic, muscular, anti-HV, antiinfertility, cardiovascular, anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, immunomodulator, anticonvulsant, antidiabetic, tranquilliser, antiulcer, antidepressant, gastrointestinal, aeuroleptic, cerebroprotective, nootropic and contraceptive activities. The NS can be used in vaccines, gene therapy and antisense therapy. Nucleic acids, expression vectors and antibodies from the present invention can be used for treating and diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          One hundred and twenty eight novel nucleic acid sequences, useful treating and diagnosing e.g. cancer, asthma and Alzheimer's.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human NS protein sequence SEQ ID NO:130.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABB06038;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-MAY-2002

                                                                                                                                                                                                                                                                                       The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins ABI5551-BI559. The genes can be used to generate fusion proteins by linking to the gene for the human simmunoglobulin G Fc (IgG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. multiple sclerosis) and viral infections (e.g. herpes))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 24-MAR-1999;

CC immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide cof the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Prager Syndrome. Other uses include the CC utilisation of the activities such as Immune system suppression, CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders. Note: The sequence data for this patent did not form or continuous co

The proteins can have activities based on the tissues and cells chapted are expressed in, such as: antiinflammatory; antirheumatic; cardiant; cc antiarthritic; hamunosuppressive; antiinflammatory; antirheumatic; cardiant; cc cardiovascular; antiandemic; antiagregant; haemostatic; vulnerary; cc antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; cardiovascular; antianemic; antiagregant; haemostatic; vulnerary; cc antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; cc antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for cf agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, cc rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal contents, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, costeoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, anticasse, Darkingon's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-030-271-3 (1-1883) x AAM25705
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 242 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Alzheimer's disease, Parkinson's disease, neurodegenerative and neurological disorders
